DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-9 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Merely “determining the face angle...” would not appear to be sufficient to constitute a tangible result, since the outcome of the determining step has not been used in a disclosed practical application nor made available in such a manner that its usefulness in a disclosed practical application can be realized. See OG Notices: 22 November 2005, "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility".

Please see Part b. *Practical Application the Produces a Useful, Concrete, and Tangible Result* under Section IV *Determine Whether the Claimed Invention Complies with the Subject Matter Eligibility Requirement of 35 U.S.C. Sec. 101*, sentence 3, in the OG Notice from 22 November 2005 states ‘In determining whether the claim is for a “practical application,” the focus is not on whether the steps taken to achieve a particular result are useful, tangible, and concrete, but rather that the final result achieved by the claimed invention is “useful, tangible, and concrete.”’

Allowable Subject Matter

Claims 10 and 11 are allowed.

The following is an examiner’s statement of reasons for allowance:

As to Claim 10, the prior art of record taken along or in combination, fails to disclose or render obvious the lie adjustment assembly comprising a lie scale plate, an arm and a guide support plate; a shaft support assembly attached to the guide support plate of the lie adjustment assembly, the shaft support assembly comprising a shaft support arm and a shaft support device with an aperture; a shaft center sensor assembly attached to the arm of the lie adjustment assembly above the base plate assembly; and, an operator interface terminal positioned on the base, in combination with the rest of the limitations of the claim.

As to Claim 11, the prior art of record taken along or in combination, fails to disclose or render obvious means for simulating the lie angle of the golf club, golf club head of face component, the simulating means positioned on the base rearward of the base plate assembly; means for centering a shaft of the golf club or a mandrel of the golf club head or face component, the centering means positioned above the base plate assembly; and means for operator interface, the operator interface means positioned on the base, in combination with the rest of the limitations of the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
